

**In the Claims:**

In the Claims:

1. (currently amended) A dispensing device for dispensing a volatile material to an ambient environment which includes comprising  
an electrically driven actuator device for dispensing a ~~the~~ volatile material ~~to an ambient environment~~ from a replaceable refill adapted to be fitted to the dispensing device  
comprising:  
a ~~refill which includes a reservoir containing a volatile liquid and which~~  
~~further includes a closure means; and~~  
a ~~switch means associated with the dispensing device adapted to engage or interact with~~  
~~the closure means when the dispensing device is appropriately assembled.~~  
a closure means arranged on the refill.  
the dispensing device comprising a switch.  
the switch and the closure means being adapted, when the refill is fitted, to enable the  
actuator device in a material-dispensing manner.  
the switch including a radio frequency transmitter and receiver circuit capable of  
transmitting a signal, and  
the closure means comprising a metallic coil capable of resonating in sympathy with the  
signal and emitting a return resonant signal which is actuator device enabling.
2. (currently amended) A dispensing device according to claim 1, wherein the actuator device is  
one of a fan, blower, heating element, piezoelectric nebuliser or other electrically driven  
device useful in vaporizing or dispersing a volatile liquid.
3. (currently amended) A dispensing device according to claim 1, ~~which comprises a plurality of~~  
~~closure means and a plurality of switch means wherein the closing means are a plurality of~~  
closing means and the switch is a plurality of switches .
4. (currently amended) A dispensing device according to claim 1, wherein the closure means is  
an electrically conductive strip or a magnet.

5. (canceled)

6.(canceled)

7. (previously presented) A process for preventing the use of inappropriate refills in an air treatment device, which includes the step of:  
providing a dispensing device according to claim 1 to an ambient environment.

8. (previously presented) A process for preventing the use of inappropriate refills in an air treatment device, which includes the step of:  
providing a dispensing device according to claim 2 to an ambient environment.

9. (previously presented) A process for preventing the use of inappropriate refills in an air treatment device,  
which includes the step of:  
providing a dispensing device according to claim 3 to an ambient environment.

10. (previously presented) A process for preventing the use of inappropriate refills in an air treatment device,  
which includes the step of:  
providing a dispensing device according to claim 4 to an ambient environment.

11. (canceled)

12. (canceled)

13. (previously presented) A dispensing device according to claim 2 wherein the closure means is an electrically conductive strip or a magnet.

14. (previously presented) A dispensing device according to claim 3 wherein the closure means is an electrically conductive strip or a magnet.
